Week of December 30, 2013**

Disclaimer

Greenville/Spartanburg

- Please note that this routine weekly briefing is for informational purposes only and will not be updated. Do not use after Wednesday. It will be removed from our website no later than noon on Wednesday.
- High impact briefings will be issued as necessary and supersede the routine briefing.

Overview

Greenville/Spartanburg

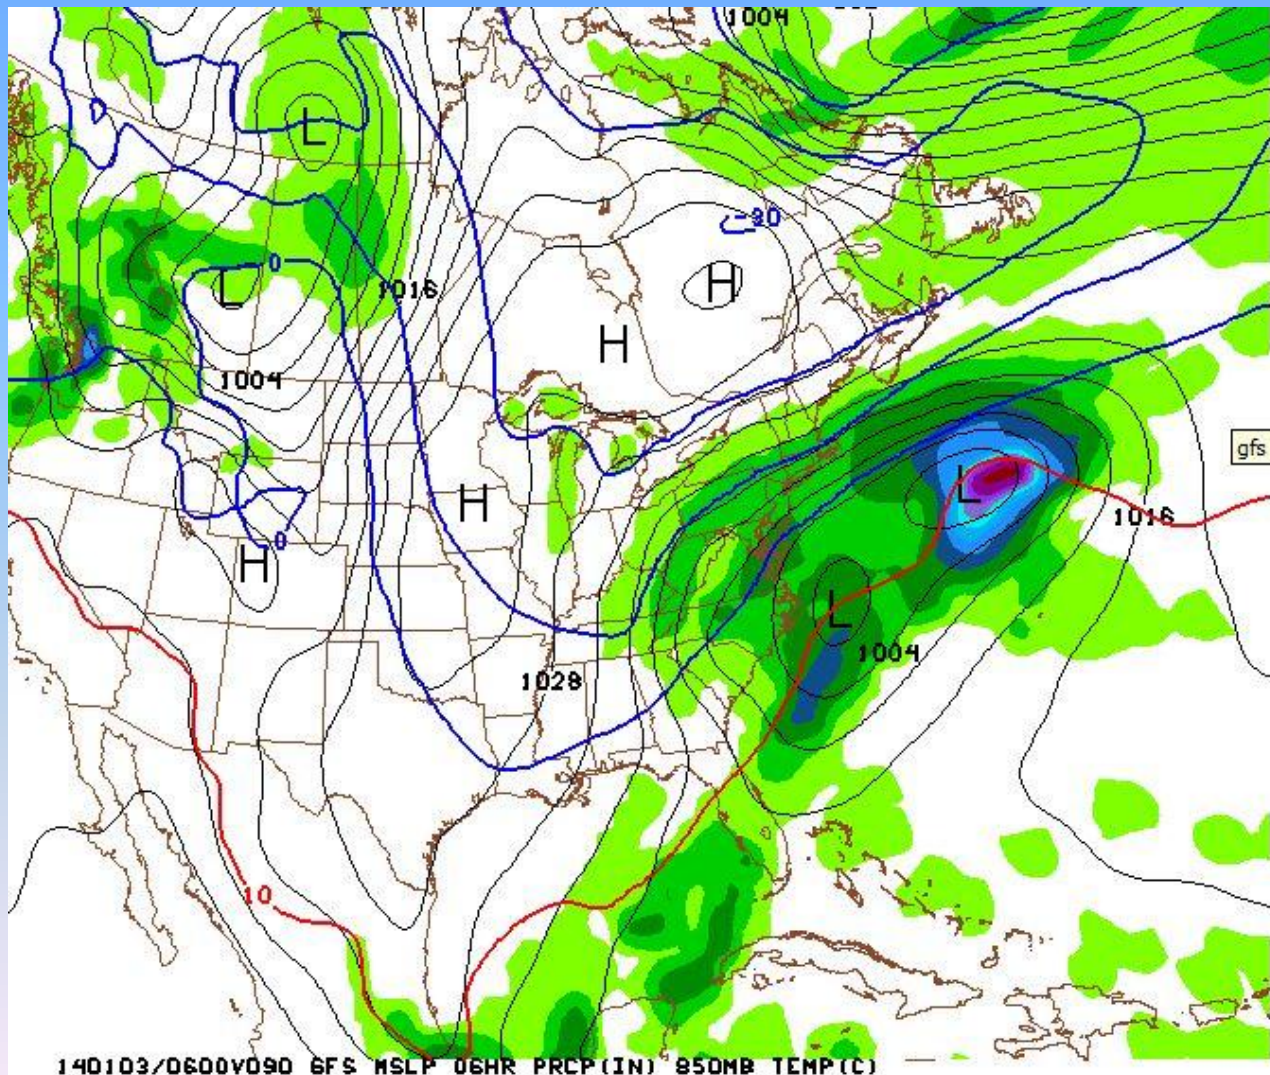

- **New Year's Eve will be dry and seasonably chilly.**
- **A complex area of low pressure will become better organized off the North Carolina coast Thursday night.**
- **Cold northwest winds behind the low may bring a period of accumulating snowfall to the North Carolina Mountains Thursday night.**
- **Another storm system may affect the region with rain and snow on Sunday, though there are vastly different numerical model solutions.**

Low Pressure Develops Thursday Night

Greenville/Spartanburg

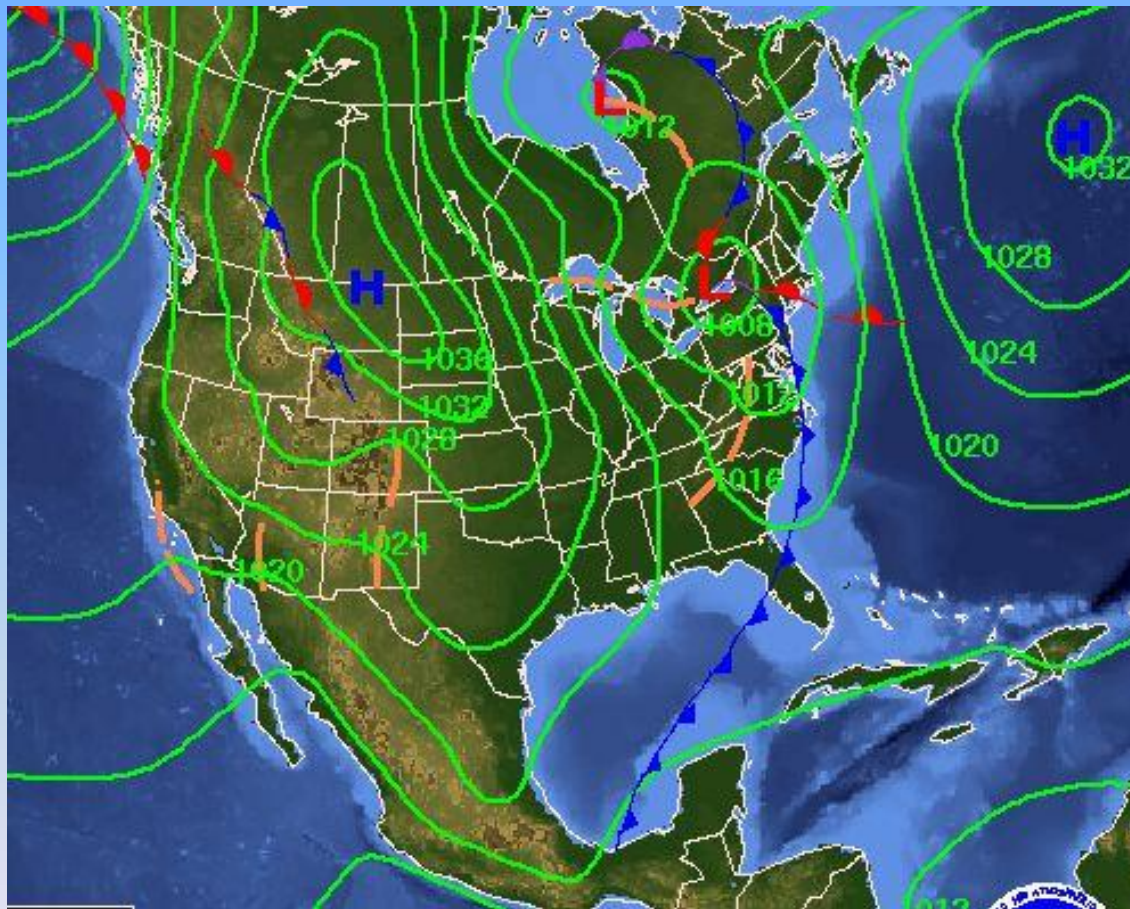

Another Area of Low Pressure Possible Next Sunday

Greenville/Spartanburg

Weather map for Sunday night, January 6th.

Summary and Highlights

- **After a dry and seasonalby cool New Years Eve, a series of artic airmasses will move across the region.**
- **There will be a chance of snow in the mountains Thursday night and again next Sunday with these fronts.**
